Contemporary Science Education
– Implications from Science Education Research about Orientations, Strategies and Assessment

A collection of invited papers inspired by the 20th Symposium on Chemical and Science Education held at the University of Bremen, 27-29 May 2010
# Contents

Contemporary science education – Implications from science education research about orientations, strategies and assessment  
*Ingo Eilks & Bernd Ralle* ................................................................. 1  

Societal issues and their importance for contemporary science education  
*Avi Hofstein, Ingo Eilks & Rodger Bybee* ............................................................ 5  

Contemporary scientific literacy and the (ir-) relevance of science education  
*Claus Bolte* ........................................................................................................... 23  

What do regulative ideas in education for sustainable development and scientific literacy as myth have in common?  
*Franz Rauch* ........................................................................................................... 35  

Contemporary issues in scientific literacy: The key challenge for science education in the new millennium  
*Richard K. Coll* ..................................................................................................... 47  

Developing scientific literacy: TY science and science scrapbooks  
*Peter E. Chilks, Sarah Hayes, Jemma Lynch & Maria Sheehan* .................. 57  

Contextualisation, de-contextualisation, re-contextualisation – A science teaching approach to enhance meaningful learning for scientific literacy  
*Jack Holbrook & Miia Rannikmäe* ................................................................. 69  

Functional roles of science in socio-scientific discussions  
*Jan Alexis Nielsen* ................................................................................................ 83  

Perspectives from research on pedagogical content knowledge: Consequences for changes in science teacher education  
*Vanessa Kind* ........................................................................................................ 97  

Understanding and assessing science student teachers’ contemporary pedagogical content knowledge  
*Pernilla Nilsson* ................................................................................................... 111  

Providing chemistry teachers with contemporary scientific activities: A three-stage model  
*Rachel Mamlok-Naaman, Avi Hofstein & Ron Blonder* ........................................... 123  

The democratic capacity of science education – Or: Is inclusive science education the contemporary science education  
*Simone Abels & Annelie Wellensiek* ................................................................. 135  

Researching the development of science teachers’ contemporary understandings of scientific literacy  
*John Loughran, Kathy Smith & Amanda Berry* .................................................. 147  

How can a multiplication in-service training system facilitate the implementation process of standard-based teaching?  
*Julia Michaelis, Dieter Schmidt & Marie-Ann Mowka* ........................................ 157
The contribution of the informal sector to school chemistry education
John K. Gilbert ................................................................................................................. 169

On judgment and decision-making about socio-scientific issues: A cross-faculty approach for learning about climate change
Dietmar Höttecke, Corinna Hößle, Ingo Eilks, Jürgen Menthe, Maria Mrochen, Helen Oelgeklaus & Timo Feierabend ................................................................. 179

Exemplifying the tentativeness of scientific knowledge in the history of modern physics and utilizing vignettes in assessing understandings
Mehmet Fatih Tasar ........................................................................................................ 193

ICT in chemistry education: Clarification or clouding
Susan Rodrigues .............................................................................................................. 207

Teaching and learning of modelling in chemistry education: Authentic practices as context for learning
Gjalt T. Prins, Astrid M. W. Bulte & Albert Pilot .............................................................. 219

Pupils’ attitudes towards biology, chemistry and physics in Croatian elementary education: A story of differences
Boris Jokic ......................................................................................................................... 231

From science education in the soviet time, via national reform initiatives, towards an international network to support inquiry-based science education – The case of Georgia and the project SALiS
Marika Kapanadze, Simon Janashia & Ingo Eilks ........................................................... 237

Active teaching strategies in science education – An e-module for in-service teacher training
Ani Epitropova .................................................................................................................. 243

Improving the learning environment: Students’ creative thinking and reasoning skills through PARSEL teaching
Miia Rannikmäe, Anne Laius & Jack Holbrook ............................................................... 247

Considerations related to the use of virtual experiments in science lessons – An experience learnt in the VccSSc project
Gabriel Gorghiu & Laura Monica Gorghiu ...................................................................... 253

ICT tools and their effectiveness in science lessons – The FISTE project experience
Laura Monica Gorghiu & Gabriel Gorghiu ...................................................................... 259

Reflections on orientations, strategies and assessment for contemporary science education
Ingo Eilks, John K. Gilbert, Avi Hofstein, Silvija Markic, John Oversby, Albert Pilot & Bernd Ralle ................................................................. 267

List of registered participants ......................................................................................... 277
